

Launch of a new Philips VideoTracer HD audio and video recorder

The innovative new Philips video and audio recorder allows you to capture irrefutable evidence when you need it

Vienne, 2019 - [Philips](#), the world leader in professional dictation solutions, has just launched its first portable video and audio recorder. The all-new Philips VideoTracer DVT3120 offers users full HD 1080p video recording using a super wide 170° angle of aperture for crystal-clear images. The VideoTracer can be used as a camera on board a vehicle or during ski tours to get evidence or to keep memories or other things.

Clear and indisputable evidence

The camera captures video with sharp and vivid details to provide clear, unbiased evidence, for example in the event of a road accident. The built-in high-quality microphone captures audio clearly, for maximum accuracy and evidence tracking, each recording can be watermarked with a date, time, user ID and GPS position. The snapshot function allows the user to capture even pictures during recording, without interrupting the video sequence.

"A driver equipped with a VideoTracer then has no fear of having to worry about proving an incident, he will have a very good one. The camera is equipped with an integrated motion sensor which, when

activated, automatically starts recording when an object enters the field of view. The pre- and post-recording functions allow users to spontaneously record important parts of incidents and never miss a moment, even after pressing the stop recording button." said Dr. Thomas Brauner, CEO of Speech Processing Solutions.

Increased durability in all situations

The new Philips VideoTracer is a portable video and audio recorder that can be attached in different ways in car DVR mode or on a jacket for outdoor use (skiing, hiking, guided tours, cultural trips...). The integrated powerful battery lasts all day long and the robust housing is ready for all weather conditions.

"The device is extremely durable and suitable for all weather conditions. Its night vision mode allows high quality video recording even in low-light conditions and the waterproof housing eliminates the need for the user to worry about rain that could damage the camera," adds Brauner.

The storage and recording capacity of the new Philips VoiceTracer is almost unlimited with a micro SD memory card input that supports up to 128GB of memory.

The user can instantly play back the recorded video and audio files using the 2" LCD screen and built-in speaker.

Philips VideoTracer DVT3120 is available from early November 2018 at Boulanger, Fnac-Darty for about 300€ttc. For more information and reseller links, please visit : www.philips.com/dictation
